

Conditional Warranty Limits

ENGINES are guaranteed to be in good operating condition within reasonable limits of specifications as stated by the seller; i.e., oil pressure, compression, and oil consumption. Only the crankshaft, block, heads, and valve train are covered under this guarantee. Accessories such as the water pump, fuel pump, distributor, carburetor, and exhaust manifold are left on for customer convenience only. Please check the lubricant and coolant level before starting the engine.

STANDARD TRANSMISSIONS AND REAR-ENDS are guaranteed functional assemblies and not noisy. Gears are guaranteed at the time of purchase. Cracked or broken teeth after sale are obvious abuse and will not be warranted. Please install new inspection gaskets before installation.

AUTOMATIC TRANSMISSIONS are guaranteed functional assemblies. It is recommended that the front and rear seals and pan gasket be replaced prior to installation. Please ask about converter alignment to prevent damage to the front pump.

OBVIOUS ABUSE, or operating the assembly when low on lubricant or coolant, violates the warranty.

ALL MECHANICAL AND ELECTRICAL PARTS are guaranteed for the specified period by the seller.

RADIATORS, HEATERS, AND BATTERIES are guaranteed not to leak and to operate effectively for the specified guaranteed period stated by the seller.

NON-DEFECTIVE PARTS RETURNED are subject to acceptance by the seller, and if accepted, are subject to a 20% handling charge upon return. Labor charges and freight costs are not refundable. Any returned part must be accompanied by a sales receipt.

PARTS PURCHASED VIA HOTLINE OR SPECIAL ORDER are subject to the warranty of our supplier.

A REASONABLE DEPOSIT IS REQUIRED FOR PARTS ordered from other sources.

WARRANTY IS LIMITED to replacement, repair, or refund at the option of the seller.

RETURNED PARTS must be in the same condition AS WHEN SOLD.

WARRANTY IS VOID if the part has been disassembled.

Please note that a 20% restocking fee is applied to some of our larger parts due to the handling and stocking efforts required for these items. This fee helps cover the work done in the back to ensure your parts are properly managed and available when needed.
